Advanced 3D Radar Technology

The Milesight 3D radar can locate the vehicle position and direction with high accuracy. Verified by AI-powered LPR algorithm, the Milesight 3D radar technology can precisely identify detection distance, speed capture and flow control, greatly optimizing traffic monitoring, and ensuring the safety of public transport.
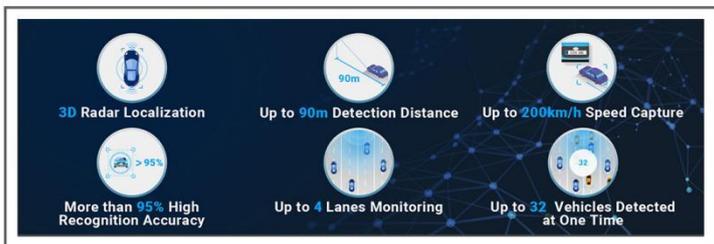

AI-powered LPR Algorithm

Based on AI algorithm, the LPR function provides value-added data via a pre-trained deep learning model, which can not only recognize vehicle plates in real time with high accuracy, but also identify more vehicle features, like vehicle type, color, etc., generating powerful security and traffic insights.

3D Radar Localization · Up to 90m Detection Distance · Up to 200km/h Speed Capture · More than 95% High Recognition Accuracy · Up to 4 Lanes Monitoring · Up to 32 Vehicles Detected at One Time

3 in 1 Super WDR Pro - 140dB

Milesight upgraded 3 in 1 Super WDR Pro outputs three frames each line, which is able to bring more details especially moving subjects. What's more, it greatly improves image quality for reducing smear and noisy points. The ratio that the brightest light signal values divided by the darkest light signal values is up to 140dB.

3 in 1 Super WDR Pro | Regular WDR
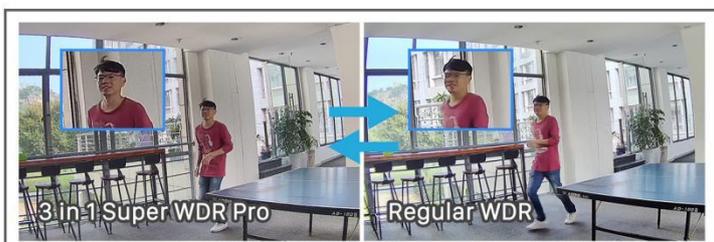

100fps

With the industry leading frame rate reaching 100fps, the cameras can easily catch images with no latency despite of the high-speed movement, which is the best choice for the demanding requirements especially for intelligent cameras.
